- **Urinalysis specimen transport**
- **Pre-culture specimen transport**
- **Preserve specimens up to 72 hours**

Boritek® Utilizing Andwin's unique molding processes, Boritek® systems stabilize urine specimens for up to 72 hours ensuring culture integrity during transport.

Urinalysis Specimen Transport

Boritek protects critical cells and casts by maintaining a controlled environment, which stabilizes the critical indicators and markers, used in dipstick testing.

Pre-Culture Specimen Transport

Boritek maintains the viability of potential bacterial pathogens found in the urinary tract system. Boritek stabilizes the specimens up to 72 hours for delayed microbiological culture and analysis and prevents the over growth of incidental organisms.
